

## Simulation Pack

You are required to design an ecommerce website showcasing computer, and IT gadgets. You are to design the website's front-end interface. This will be a website that will celebrate your skills, knowledge and experience and can be a source of information for potential customers, friends, and industry partners.

Your website should list at least 5 pages:

- Homepage
- Support to customer including support flowchart and contact information.
- Product description page
- About us
- Blog

Your webpage must include the following components and features:

- images
- graphics
- videos
- animation
- navigation bar.
- Footer
- Box model.
- Animations and Transitions
- Responsive Web Design

You should also add your contact details to the footer so that you can be contacted via this website.

## Markup language procedures

Follow markup language procedures for creating web pages. This will depend on the language you choose.

Procedures may therefore include:

HTML documents to be created by following procedures at:

[https://www.w3schools.com/html/html\\_editors.asp](https://www.w3schools.com/html/html_editors.asp)

XML Documents are to be created by following the procedures at:

<https://www.lifewire.com/write-first-xml-document-3466592>

Depending on the markup language you use, you will need to follow a style guide. Here is an example for HTML which can be followed:

<https://google.github.io/styleguide/htmlcssguide.html>
